

IT PROCUREMENT

The real cost of a device fleet

Buying the hardware is the cheap part. Running and securing it for years is the cost.

THE PRICE TAG

The invoice is only day one.

Every device then needs setting up, supporting, protecting and, one day, retiring safely.

01

Deploy

THE WORK

Imaging, enrolment, shipping and getting each person productive on day one.

THE QUESTION

Who sets up a new starter's device, and how long does it take?

02

Support and repair

THE WORK

Tickets, faults, warranty claims and the hours people lose while they wait.

THE QUESTION

What happens when a laptop fails the day before a deadline?

03

Secure

THE WORK

Patching, encryption, endpoint protection and a plan for lost or stolen devices.

THE QUESTION

Could you prove every device is encrypted and up to date today?

04

Retire

THE WORK

Certified data wiping, responsible disposal or resale, and planning the next refresh.

THE QUESTION

Where do your old devices go, and what is still on them?

Plan the lifecycle, not just the purchase.

From supply to secure retirement, one partner can manage the whole fleet.
