HOW TO USE IT

Run it once a month, with the people who own the spend.

Each check takes minutes in the AWS console.
The value is in doing it every time.

01

Give every resource an owner

DO THIS

Tag by team, project and environment, then switch on cost allocation tags.

USING

AWS Cost Allocation Tags and Tag Editor.

02

Switch off what is idle

DO THIS

Schedule non-production to stop out of hours, and rightsize from real utilisation.

USING

Instance Scheduler and Compute Optimizer.

03

Clear out old storage

DO THIS

Delete unattached volumes and stale snapshots, and add lifecycle rules to buckets.

USING

EBS, snapshots and S3 lifecycle policies.

04

Match commitments to usage

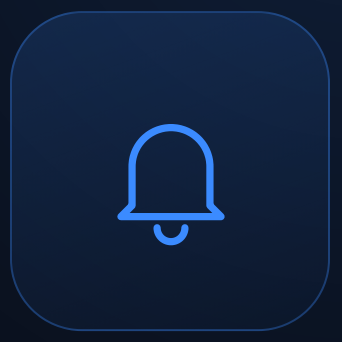

DO THIS

Check coverage and utilisation before you buy or renew anything.

USING

Savings Plans and Reserved Instance reports.

05

Set alerts, then review

DO THIS

Put budgets and anomaly alerts in place, and review them with each owner.

USING

AWS Budgets and Cost Anomaly Detection.

THE CHECKLIST

Five checks. Every month.
